SUMMARY

Full Stack Developer with 4+ years of experience building SaaS web applications, admin portals and REST APIs. Currently developing features for a fleet operations and driver scheduling platform (TypeScript, NestJS, React, PostgreSQL), working directly with the client from requirements to delivery. Previously built a PHP/MySQL ticketing platform with online payments, a multi-client admin portal used by 10+ companies, and REST APIs for mobile apps and self-service kiosks. Uses AI-assisted development (Claude Code) as a core part of the daily workflow.

EXPERIENCE

Full Stack Developer — Saniva

Feb 2022 – Present | Požarevac, Serbia

Fleet operations and workforce planning SaaS platform (TypeScript, NestJS, React, PostgreSQL) **Nov 2025 – Present**

- Work directly with the client to gather requirements and deliver new features end-to-end, from data model and REST APIs (NestJS, PostgreSQL) to React UI.
- Develop the dispatcher module for driver work planning, daily shift scheduling and absence management, digitizing planning processes previously handled manually.
- Built a bulk timetable import from Excel (XLS) files, eliminating manual schedule entry and significantly reducing operator setup time.
- Use AI-assisted development (Claude Code) as the primary workflow for implementation, refactoring and test generation, accelerating feature delivery.

Passenger transport ticketing and operations platform (PHP, MVC, MySQL, JavaScript) **Feb 2022 – Nov 2025**

- Built and extended a multi-client SaaS admin portal used by 10+ client companies, with role-based access control, Excel/PDF reporting and refunds management, automating their day-to-day operations.
- Developed a customer-facing ticket sales website with seat reservation, online payments and automated QR-code PDF tickets, enabling fully self-service online sales.
- Implemented REST APIs powering the admin portal, mobile applications, self-service ticket kiosks and a smart-city e-bike sharing system.
- Developed vehicle tracking on interactive maps (Google Maps API) and dispatcher features, giving operators live visibility of their fleet.
- Built a Raspberry Pi digital signage solution (PHP, JavaScript) that plays video ads locally, without relying on a constant network connection.
- Optimized slow database queries and pages, resolved production issues and refactored legacy code within a custom PHP MVC architecture.

SKILLS

Programming Languages: TypeScript, JavaScript (Node.js), PHP, SQL, HTML, CSS
Backend: NestJS, REST APIs, PHP (custom MVC), Prisma ORM, JWT authentication, Swagger/OpenAPI
Frontend: React, Tailwind CSS, jQuery
Databases: PostgreSQL, MySQL
APIs & Integrations: Google Maps API, online payments, kiosk and mobile app APIs, Raspberry Pi devices
Tools & Workflow: Git, GitHub, Claude Code (AI-assisted development, prompt & context engineering, MCP)
Domain: SaaS platforms, fleet management, scheduling and dispatch, ticketing

EDUCATION

Bachelor of Applied Studies (180 ECTS) — Information Systems and Technologies

2017 – 2021

Belgrade Academy of Business and Arts Applied Studies (BAPUSS)
Professional title: Professional Engineer of Information Systems

LANGUAGES

Serbian: Native · **English:** Professional working proficiency (B2)
